

PlayArena Fixed Flowcharts & Detailed Explanation

1. High-Level System Architecture

Browser / UI Component

This component manages operations related to browser / ui component within the PlayArena platform.

Axios API Client

This component manages operations related to axios api client within the PlayArena platform.

REST API Requests

This component manages operations related to rest api requests within the PlayArena platform.

Spring Boot Controllers

This component manages operations related to spring boot controllers within the PlayArena platform.

Service Layer

This component manages operations related to service layer within the PlayArena platform.

JPA Repository

This component manages operations related to jpa repository within the PlayArena platform.

MySQL Database

This component manages operations related to mysql database within the PlayArena platform.

2. User Journey & Customer Flow

User Journey Flow

User Visits Homepage

This stage explains user interaction and workflow inside the PlayArena system.

Login / Register

This stage explains user interaction and workflow inside the PlayArena system.

Browse Products & Events

This stage explains user interaction and workflow inside the PlayArena system.

Add to Cart / Register Tournament

This stage explains user interaction and workflow inside the PlayArena system.

Checkout & Payment

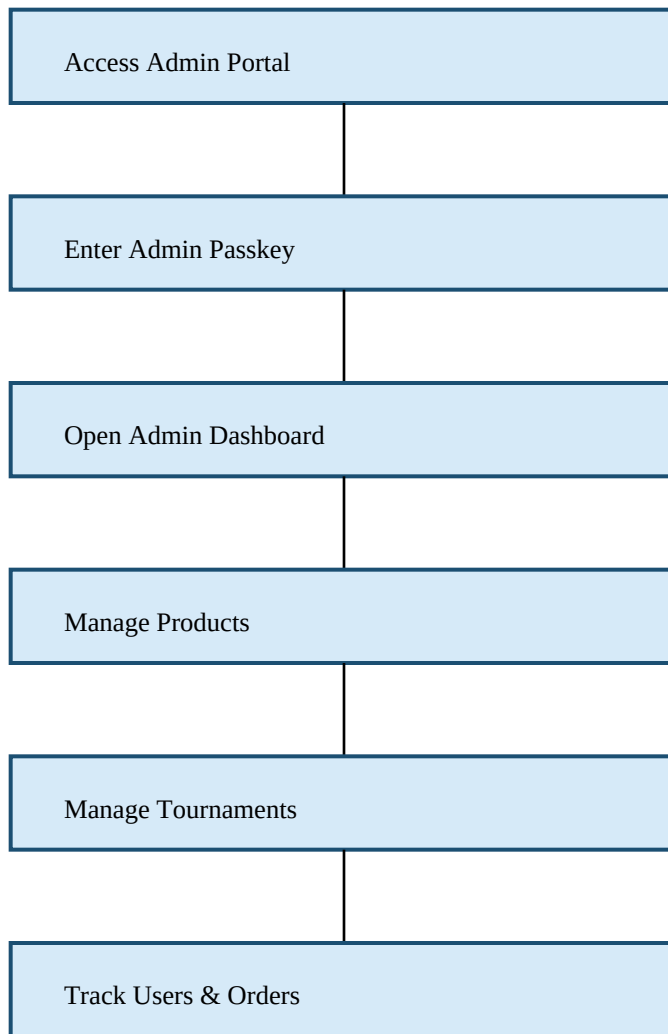

This stage explains user interaction and workflow inside the PlayArena system.

Payment Success / Failure

This stage explains user interaction and workflow inside the PlayArena system.

3. Admin Management Workflow

Admin Workflow Flow

Access Admin Portal

This operation allows administrators to control and manage platform functionality.

Enter Admin Passkey

This operation allows administrators to control and manage platform functionality.

Open Admin Dashboard

This operation allows administrators to control and manage platform functionality.

Manage Products

This operation allows administrators to control and manage platform functionality.

Manage Tournaments

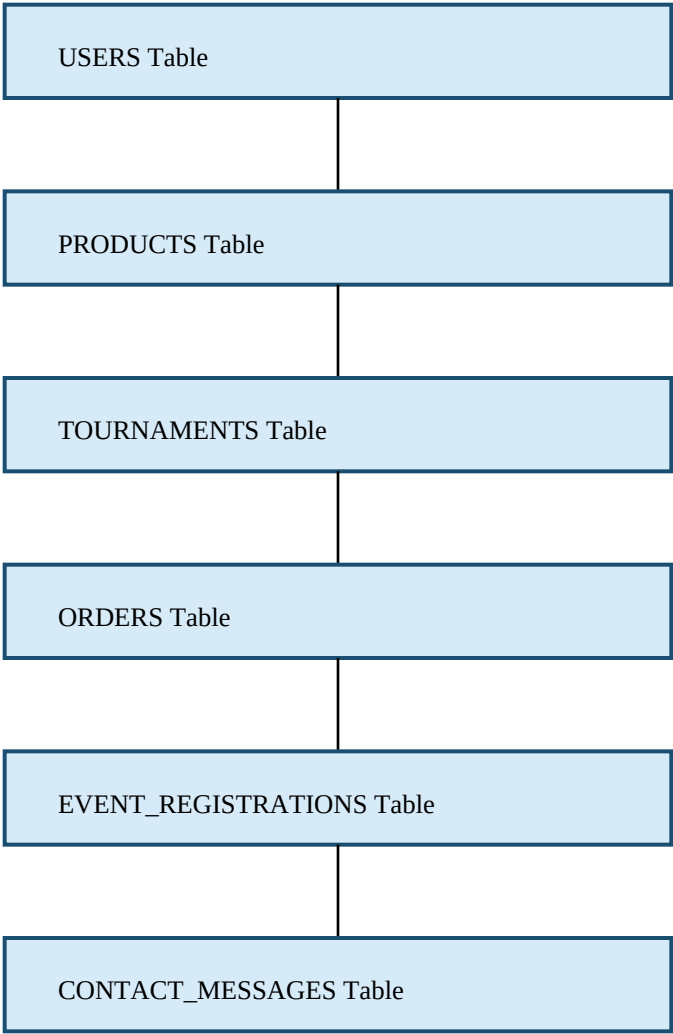

This operation allows administrators to control and manage platform functionality.

Track Users & Orders

This operation allows administrators to control and manage platform functionality.

4. Database Entity Relationship

Database ER Flow

USERS Table

This database table stores and manages information related to users table.

PRODUCTS Table

This database table stores and manages information related to products table.

TOURNAMENTS Table

This database table stores and manages information related to tournaments table.

ORDERS Table

This database table stores and manages information related to orders table.

EVENT_REGISTRATIONS Table

This database table stores and manages information related to event_registrations table.

CONTACT_MESSAGES Table

This database table stores and manages information related to contact_messages table.

5. Project Summary

PlayArena Platform Overview

The PlayArena platform is developed using:

- React.js Frontend
- Spring Boot Backend
- MySQL Database
- JWT Authentication
- REST APIs
- Admin Dashboard
- Wallet & Credits System
- Tournament Registration System
- Sports E-Commerce Store

Architecture Flow:

Frontend → API Layer → Backend → Database
